

# SPEEDFEED™ watering system

Use components as per diagrams below dependent upon whether to be used in a Raised Bed, Planter or Growbag

## RAISED BEDS

### Assembly

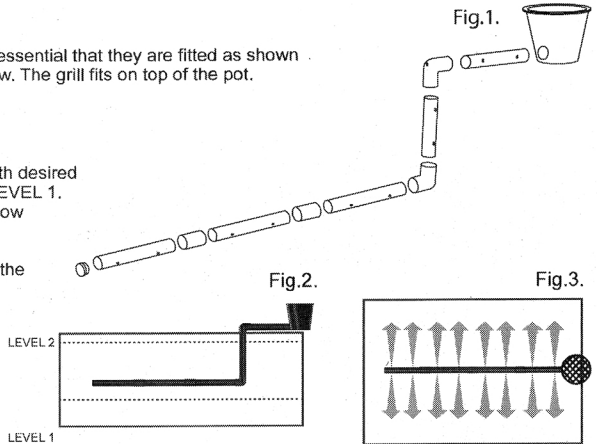

Please note that when assembling the sections of pipe it is essential that they are fitted as shown & that the holes on the pipe line up as shown in (Fig.1) below. The grill fits on top of the pot.

### Fitting

1. Assemble the tubing as directed (Fig.1.)
2. Place the assembled tubing inside the raised bed & fill with desired compost until the level reaches the bottom of the tubes LEVEL 1. (for a deep raised bed use both vertical tubes. For a shallow raised bed use just the one tube).
3. The tubing should now be resting on top of compost with the pot sat on the edge of the raised bed (Fig.2.)
4. Fill the rest of the raised bed with compost to LEVEL 2 and add any plants/veg.

### Watering

Simply pour water & feed into the pot to supply straight to the roots of the plants/veg (Fig.3.).

## PLANTERS

### Assembly

See diagram 1.  
Ensure that the holes face as shown to ensure good water distribution.

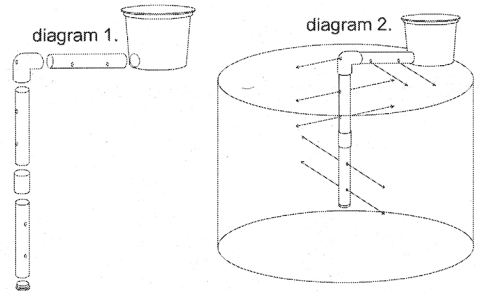

### Fitting

See diagram 2  
Insert the watering tube near to the centre of the planter.

The water pot should rest on top of the compost and be horizontal.

### Watering

Water as per plant growing instructions.

## GROWBAGS

### Assembly

Please note that when assembling the 3 sections of pipe it is essential that they are fitted as shown & that the holes on the pipe line up together. The grill fits on top of the pot.

### Fitting

1. Position growbag.
2. Measure 4" (100mm) from the end of the bag & 2" (50mm) off the centreline (see Fig.1).
3. With a sharp knife make a 1" (25mm) incision through the top of the bag.
4. Insert the pipe into the slit **making sure to keep it above the compost.**
5. When fitted the header pot should be seated on top of the bag (see Fig.2.)

### Planting

When planting out the growbag DO NOT cut away any of the plastic wrapping. With a sharp knife cross cut the wrapping (see Fig.3.) making an opening large enough to take the plants. When planting is complete fold back flaps to reseal the bag.

### Watering

Water growbag as per the instructions.
